Fly-Cutter Reamer

Recommended for the following soil conditions:

- Clays
- Sands
- Loams

- The cutting wings are placed on a shallow angle to achieve smooth cutting in a variety of conditions.
- Large carbide teeth provide aggressive cutting action.
- The replaceable fluid jets distribute fluid to the outer diameter of the bore hole for maximum mixing efficiency.
- The wide centralizing ring helps keep the reamer centered in the hole.
- The rear mixing wings are placed on a steep angle for aggressive shearing and mixing of cuttings into the drilling fluid.
